PRO AND CON

The producer against the consumer. Never has the eternal conflict been better exemplified than in the situation that confronts every seed dealer in 1937. 1936 production was short. It was supplemented by carryover of Timothy, Bluegrass and Redtop. Now it is somewhat neutralized by imports of unusually high grade clover. Prices at planting time will be the compromise route laid down by the impact of these two forces on each other. In general, the areas west of the Appalachians are arrantly bullish, with the sky as the limit, largely occasioned by the feeling

that government payments will cause an unusual demand for seed aside from the normal and aside from the effects of the drought. The consuming East on the other hand, is much more cautious. It prefers to wait and see which way the cat jumps. Only time will tell.

CONTRADICTIONS OF SEED LAWS

Bermuda Grass is a weed seed in most state seed laws, yet millions of pounds of it are bought annually. Black Medic is condemned as a weed by the Federal Seed Act and Practically all state seed laws, yet the Government is buying thousands of pounds of it for free distribution by the Soil Conservation Service. It is to laugh!

Lespedeza Sericea has been officially re-baptized Chinese Lespedeza.

Page Tugwell! At the time of their bank difficulties, the Van Sweringens listed as part of their necessary personal living expenses \$20,000. to support their farm!

Over 8,500 bales of cotton were used in experimental highway construction last summer.

Maryland ranked sixth in the production of clover seed last year.

When you pay your tax bill this year, remember that the Government is lending it to your cooperative competitor at 2%. What do you pay?

Bags not returnable.
